

The seeds of AmbaSoft's success with KinderMorgan Energy Partners began when Santa Fe Pipelines, a Fortune 100 company, chose DEC to build a robust, user-friendly system to manage its vast, complex Refined Petroleum Operations. Being the biggest account in the Southwest, DEC chose this as its showcase project.

LARGE SCALE LEGACY CONVERSION TO .NET FOR FORTUNE 100 COMPANY

Randy Wang and Rali Panchanatham, two of AmbaSoft's principals, functioned as Senior Project Managers for several critical areas in this 40 person-year, multi-million dollar success story.

After the development completed, Santa Fe Pacific Pipelines (now part of Kinder Morgan Energy Partners) retained Randy and Rali to deploy the application and develop additional systems.

In 2004, Kinder Morgan Energy Partners completed a major 30 person-year .NET development project. Randy played the key role of technical architect for this project using ASP.NET, VB.NET, ADO.NET, MSMQ, and MS SQL 2000. The project was completed on time and within budget.

We are confident in our ability to work with Corporations who migrate to the .NET environment. We believe we have the experience, the track record, and the references to prove it.

The Experience.

The Track Record.

The References.
